AG992-PRO GNSS Auto-Steering System

Overview

The Tersus AG992-PRO Auto-Steering System is an automatic steering system which uses high-torque motor control steering wheel. It integrates the advantages of convenient installation, large torque, high precision, low noise, low heat and quick debugging. It is suitable for various applications of tractors, harvesting machines, plant protection machinery, rice transplanters and other agricultural models.

The system includes a control tablet, integrated with a high-precision GNSS board, a steering wheel motor with a built-in controller, a high-performance Inertial Measurement Unit(IMU) and a high-precision GNSS receiver with satellite-based Precise Point Positioning (PPP) service. It controls the vehicle and co-operates with/without a base station to form a whole machine control system for agriculture applications. It can be widely used for sowing, cultivating, trenching, ridging, spraying pesticide, transplanting, land consolidation, harvesting and other work scenarios.
