- Note:
- (1) The initialization time depends on various factors, including the number of satellites, observation time, atmospheric conditions, multi-path, obstructions, satellite geometry, etc.

(2) The initialization reliability may be affected by atmospheric conditions, signal multipath, and satellite geometry.

(3) Input of 28~36V DC can be customized. It is recommended using 2A instead of 1A when the external power is 5V.

(4) The actual size/weight may vary depending on the manufacturing process and measurement method.
